skills

Game Programming, Game Design, AI in Games, Computer Graphics, Computer Animation, Object-Oriented Programming, Algorithmic Complexity, Data Structures, Machine Learning, Databases, Physics, Mathematics, Numerical Analysis, Computational Physics

Programming Languages: C#, Java, C/C++, Python, MATLAB, FORTRAN, Wolfram Mathematica, HTML, PHP, SQL

Tools: Unity, Unreal Engine 5, Blender, Krita, Adobe Photoshop, LaTeX, Github, Microsoft Visual Studio, Eclipse IDE, OpenGL, PyCharm IDE, Microsoft Office

Operating Systems: Windows, Linux

experience

INTERN Full-time, CYENS - Centre Of Excellence: V-Eupnea Group

Jun 2022 - Mar 2023

The project was about studying how Reinforcement Learning techniques can be used to train a multi-agent team with different skills and was published in a *Special Issue of the Journal Computer Animation and Virtual Worlds*.

TEACHING ASSISTANT Part-time, University of Cyprus

Sep - Dec 2021

Assignment grading for the undergraduate level course "Distributed Algorithms".

education

MSc in Computer Science, Final Grade: 9.09/10

2020 - 2023

University of Cyprus

Computer Games Software Technology, Computer Graphics: Modeling & Realism, , Object Oriented Programming, Data Structures and Algorithms, Algorithms and Complexity, Artificial Intelligence, Databases, Distributed Systems

MSc in Theoretical Physics, Class of Award: Distinction

2018 - 2019

University of Edinburgh

BSc in Physics, Final Grade: 8.46/10

2014 - 2018

University of Cyprus

game jams

IN PASSING, #3 in Community's Voice, Tools: Unity, C#, Krita - [View Project](#)

thatgamecompany

Theme: Generosity, Duration: 3 weeks, Team: 1, Role: Programming, Art, Design

x COREBLAZER

Game Jam 2025

In this 2D point and click puzzle game you can explore the world and discover ways to help the stray cats in a forest town.

LOST IN PAGES, Tools: Unity, C#, Photoshop - [View Project](#)

Brackeys Game

Theme: Calm Before The Storm, Duration: 1 week, Team: 2, Role: Programming, Art, Design, Writing

Jam 2024.2

A 2D story based puzzle game, where puzzle mechanics are closely related to the story.

QUANTANGLED, Tools: Unity, C# - [View Project](#)

GMTK Game Jam 2024

Theme: Build To Scale, Duration: 72 hours, Team: 9, Role: Programming

A 2D platformer game which includes an object entanglement and resizing mechanic that the players must exploit to complete the game.

game projects

MECHANICS FOR SURVIVAL GAME, Tools: Unity, C#, Photoshop - [View Project](#)

Implementation of an inventory and crafting system for a survival game. This includes resource gathering, storing, and crafting items based on recipes, using items depending on their type, and updating player stats.

PUZZLE MECHANICS, Tools: Unity, C#, Photoshop - [View Project](#)

Implementation of piecing together a torn sheet of paper in any position the player wants.

COLLABORATIVE MUSEUM HEIST WITH REINFORCEMENT LEARNING

Tools: Unity, C#, Unity ML-Agents Toolkit, Blender - [View Project](#)

36th International Conference on Computer Animation & Social Agents 2023 (CASA 2023)

MSc Thesis &
Internship at CYENS

We created a game environment that simulates a museum heist, where the objective of the successfully trained team of robbers with different skills (Locksmith, Technician) is to steal valuable items from the museum without being detected by the scripted security guards and cameras.

MINI GAME: CHICKEN ESCAPE, Tools: Unity, C#, Blender - [View Project](#)

An endless runner game with turns. A mechanism procedurally generates the path, along with the items and removes them when necessary to ensure memory efficiency.

other projects

BEHAVIOUR BLENDING, Tools: Unity, C#, Unity ML-Agents Toolkit

An effort to blend the flee and seek behaviour. The behaviours were trained separately using Reinforcement Learning. Afterwards, we used the user defined weights to blend the outputs of the two policies.

INTERACTION FIELDS, Tools: Unity, C#, Unity ML-Agents Toolkit

Studying how a force field can be used to guide crowds. We used Reinforcement Learning to train a force field instead of individual agents, to guide multiple agents from a starting region to a goal region.

OBJECT-ORIENTED PROGRAMMING PROJECTS, Tools: Java, Eclipse IDE

- Implementation of an adapted version of the Battleship game where the user plays against the computer.
- Implementation of a simulation that takes place in a 2D environment where ants, termites, and wood exhibit a behaviour based on given rules.

DATABASE PROJECT, Tools: Microsoft SQL, PHP, HTML

Implementation of a database for questionnaires that are developed by multiple companies and showcasing the results in a webpage. The project was a team effort.

DISTRIBUTED SYSTEMS PROJECT, Tools: C, Linux

Implementation of a program that, given a set of input numbers and a desired output, finds the mathematical operation giving the closest number to the output. We created N child-processes each one solving the problem using a stochastic method and returning their result to the parent.

languages

English Full professional proficiency, IELTS (Overall Band Score: 7.5)

Greek Native proficiency

Swedish Beginner, SFI Level C - In progress

honors & awards

Evagoras and Praxandros Scholarship - Department of Computer Science (University of Cyprus)

This scholarship covered the tuition fees for the Master of Science in Computer Science

Highly Skilled Workforce Scholarship (University of Edinburgh)

This scholarship covered the tuition fees for the Degree of Master of Science in Theoretical Physics

interests

Video Games
Tabletop RPGs

Digital Art
Interior Design
